Der HARDY-Lippenretraktor ist am oberen Rand eines HARDY Nasenspekulas angebracht, um die Oberlippe außerhalb des engen Bereichs zwischen den beiden Valven zu halten.

HARDY Lip Retractor is placed around the upper edge of a HARDY Nasal Speculum to keep the prolapsing upper lip out of the narrow field between the two valves.

L'écarteur de la lèvre HARDY est fixé au bord supérieur d'un spéculum pour le nez HARDY pour garder la lèvre supérieure entre les deux valves en dehors de la gamme étroite.

El separador de labios HARDY está fijado al borde superior de un espéculo nasal HARDY para mantener el labio superior entre las dos valvas fuera del sector estrecho.

87,5 - 88% Wolframkarbid,
12% Nickel,
0 - 0,5% Chromkarbid
Die mit diesem Werkstoff erreichte Abriebs- und Verformungsfestigkeit des Zahnprofils, sorgt so für die lange Gebrauchsfähigkeit des Instruments.

As a result of HEBUDUR-TC inserts, the instrument keeps its most important functional characteristic: the touch. The unusual hardness of the insert material is reason of its special composition.
87,5 - 88% Wolfram Carbide,
12% Nickel,
0 - 0,5% Chrome Carbide
The rubbing- and deformation solidity of the tooth profile, obtained by this material, takes care for the long use of instrument.

Grâce aux inserts HEBUDUR en carbure de tungstène, l'instrument garde son caractère le plus fonctionelle: l'adhérence. La dureté extraordinaire du matériel résulte de sa compostion particulière:

DR. MED. ANDREAS OESCH

Andreas Oesch ist Gefäßchirurg und betreibt eine auf Venenbehandlungen spezialisierte Praxis in Bern. 1984 entwickelte er das Venenhäkchen Nr. I, welchem später die feineren Versionen II und III beigefügt wurden; im Jahre 1992 folgte der Pin-Stripper und seine Derivate. Mit der Firma HEBUmedical wurde eine nochmals verfeinerte Version des bewährten Venenhäkchens, die Nr. IV black, sowie eine Pin-Stripper-Variante entwickelt, welche das Ausspülen und die Anästhesierung des Strippingkanals ermöglicht.

Andreas Oesch is a vascular surgeon and runs a practice which is specialized in vein treatments in Bern. In 1984 he developed the vein hook no. I, the versions II and III were added later.
In 1992 the PIN-Stripper and his derivatives followed. With the company HEBUmedical a more fine version of the proven vein hook was developed, the no IV black as well as a PIN-Stripper variation. This enables the rinsing and anesthesia of the stripping channel.

Andreas Oesch est chirurgien vasculaire et il exploite un cabinet médical à Berne qui se spécialise dans les traitements des veines. En 1984, il a développé le crochet de veine no. I. Plus tard, des versions plus fins II et III ont été ajouté. En 1992 arrivait le PIN-stripper et ses dérivés. Avec la compagnie HEBUmedical, une version encore plus fine de ce crochet, le no. IV black et aussi la variante de PIN-stripper, a été developpé. Cette version permet le rinçage et l'anesthésie du canal de stripper.

Mit dem Einbringen von Tumeszenz-Lösung wird der Strippingkanal zusätzlich anästhesiert und nach dem Stripping von Koagula befreit. Im Vergleich zum eigentlichen Pin-Stripping wird die Vene vom Instrument herausgelöst, was das Risiko einer inkompletten Venenentfernung stark minimiert. Bei beiden Methoden muss die Vene in der Peripherie nicht aufgesucht werden, eine Naht der unteren Stichinzision ist nicht erforderlich.

With the introducing of the tumescent solution the stripping channel will be additionally anaesthesised and the coagula will be removed after the stripping.
In comparison with the usual Pin-Stripping the vein will be loosed from the instrument, what strongly minimizes the risk of an incomplete vein removal. With both methods you don´t have to search the vein in the periphery, a suture of the lower stitch incision is not necessary.

Avec l'introduction de liquide tumescente le canal est en outre anesthésié et puis libéré de formation de caillots.
En comparaison avec le PIN-stripper réelle, la veine est retirée de l'instrument, ce qui minimise fortement le risque d'un enlèvement de veine incomplète.
Avec les deux méthodes, il n'est pas nécessaire rechercher la veine dans la périphérie et une suture de l'incision inférieure n'est pas nécessaire.

Con la introducción de la solución tumefacción se anestesia el canal de stripper adicionalmente y la coagula se remueve después el stripping.
En comparación con el PIN-Stripping habitual se separa la vena del instrumento lo que minimiza mucho el riesgo de una eliminación de venas incompleta. Con ambos métodos no se tiene que buscar la vena en la periferia, una sutura de la incisión punzada abajo no es necesario.

Besondere Vorteile:
Hebel austauschbar und Blätter ohne Schrauben, glatte Flächen, keine überstehenden Teile, daher kein Hängenbleiben von Ligaturfäden

Special advantages:
Improved fixing system for interchangeable blades, therefore no risk of catching sutures, no protruding parts

Avantages particuliers:
Lames interchangeables sans vis ni levier, pas de pièces saillantes, des surfaces lisses, ce qui fait que les fils de ligature n'accrochent pas

Ventaja especial:
Hojas intercambiables sin tornillos ni palancas, sin partes que resalten, superficies planas, por ello no se enganchan los hilos de sutura

Die Blätter werden paarweise geliefert

The blades are delivered in pairs

Les lames sont livrées par paires

Für temporären Gebrauch - abgerundete, pyramidenähnliche Struktur der Maulinnenfläche, für schonendes, sicheres Festhalten der Gefäße. Der fest eingestellte Schließdruck gewährt eine risikofreie Anwendung.

For temporary occlusion - rounded, pyramid-like structure of the blade surface for safe and careful gripping of vessels. No risk due to ridly fixed closing force.

Pour l'utilisation temporaire - surface de l'intérieur de la bouche qui a une structure arrondie et pyramidale, pour la fixation indulgente et sûre des vaisseaux. La pression de fermeture qui est fixé, accorde une application sans risque.

Para un uso temporal - estructura redondeada y piramidal de la superficie interior de la boca para sujetar los vaso cuidadosamente y seguramente. Una aplicación sin riesgos está garantizada por la presión de cierre fija.

McIntosh Glasfaseroptik-Laryngoskop mit flexibler Spitze für die schwierige Intubation.
Durch die abgewinkelte Spitze bis zu 60°, erfolgt eine erhebliche Reduzierung der Verletzungsgefahr bei Problempatienten. Die Epiglottis wird beim Einführen des Spatels angehoben.
Die Sicht auf Kehlkopfeingang bzw. Stimmbänder ist somit frei.
Übermäßiger Druck auf die obere Zahnreihe die Zunge und den Rachenraum wird vermieden.
Passt auf alle Standardgriffe mit Glasfaseroptik.
Rostfreier Edelstahl.

McIntosh Fiber Optic Laryngoscope with flexible tip for the difficult intubation.
The tip inclined at an angle of up to 60° substantially reduces risk of injury to problem patients.
The epiglottis is lifted when inserting the spatula, ensuring a clear view of the laryngeal inlet and vocal chords.
Excessive pressure is avoided on the top teeth, tongue and pharynx.
Fits on all standard fiber optic handles.
Stainless steel.

Laryngoscope Fibre Optique McIntosh avec pointe souple pour l'intubation délicate.
La pointe coudée jusqu'à 60° se traduit par une réduction sensible du risque de blessures sur patients problématiques.
L'épiglotte est relevée lors de l'introduction de la spatule.
La vision sur l'entrée du larynx et les cordes vocales est ainsi dégagée.
Une pression excessive sur la rangée supérieure de dents, la langue et la cavité pharyngée est évitée.
S'adapte sur toutes les poignées standard en fibre optique. Acier fin inoxydable.

Laringoscopia con fibra óptica McIntosh con punta flexible para intubaciones difíciles.
Gracias a la punta acodada en un ángulo de hasta 60° se consigue una considerable reducción del riesgo de lesiones en pacientes problemáticos. La epiglotis es levantada cuando se introduce la espátula.
La visión de la entrada a la laringe o las cuerdas vocales queda libre de esta forma.
Se evita la presión excesiva sobre la fila superior de dientes, la lengua y la cavidad faríngea.
Se ajusta a todos los mangos estándar de fibra óptica.
Acero inoxidable.

HEBU manufix – Handschlaufe für mikrochirurgischen Einsatz

(DPA 10 2009 005 659.9)

Das Instrument wird proximalseitig in einer Öffnung der Handschlaufe festgehalten, sodass sich bei Betätigung des Instruments eine verbesserte Führungsstabilität ergibt. Dadurch werden Fehlbewegungen beim Betätigungsvorgang reduziert oder vollständig vermieden.

Der Instrumentenhalter HEBU manufix besteht aus einer anschmiegsamen Schlaufe, die die Innenhand umschließt und zwischen Daumen und Zeigefinger eine Haltevorrichtung zur Aufnahme des proximalen Instrumentenschafts zur Verfügung stellt. Die stabilisierende Wirkung auf die Führung des Instruments ergibt sich bei distalseitiger Betätigung durch den zusätzlichen Haltekontakt am Instrumentenende.

Die weiche Handschlaufe HEBU manufix legt sich angenehm und selbsthaltend um die Innenhand, sodass die Hand- und Fingerbeweglichkeit praktisch unbeeinträchtigt bleiben.

Die flexible Arretierung lässt dem Operateur volle Beweglichkeit, sodass er seine jeweils gewohnte Operationstechnik uneingeschränkt praktizieren kann.

Der griffsympathische Instrumentenhalter aus Weichsilikon ermöglicht einfachen Instrumentenwechsel, ist sterilisierbar und sowohl links- als auch rechtshändig einsetzbar.

> F

HEBU manufix – Tirant de main pour l'utilisation micro-chirurgicale

(DPA 10 2009 005 659.9)

L'instrument est maintenu côté proximal dans une ouverture du tirant de sorte qu'il en résulte, lors de l'actionnement de l'instrument, une stabilité de guidage améliorée permettant de réduire ou d'éliminer entièrement les faux mouvements.

Le porte-instrument HEBU manufix est constitué d'une bride souple qui entoure l'empaumure et offre, entre le pouce et l'index, un dispositif de serrage destiné à recevoir l'instrument proximal. L'effet stabilisateur sur le guidage de l'instrument est produit, lors de l'actionnement côté distal, par le contact de maintien supplémentaire à l'extrémité de l'instrument.

Souple et auto-tenante, la poignée HEBU manufix épouse agréablement l'empaumure de sorte que la mobilité de la main et des doigts est pratiquement intégralement conservée.

Le dispositif d'arrêt flexible laisse à l'opérateur son entière liberté de mouvement de sorte qu'il peut pratiquer dans tous les cas et sans réserve la technique d'opération habituelle. Agréable au toucher, le porte-instrument en silicone souple permet un changement d'instrument simple, est stérilisable et utilisable par les gauchers comme par les droitiers.

(DPA 10 2009 005 659.9)

The instrument is held at the proximal side in an opening in the hand loop, providing improved guidance stability when operating the instrument. This reduces or even completely eliminates the effects of incorrect movements when operating the instrument. The HEBU manufix instrument holder comprises a supple loop which encloses the palm of the hand and provides a holding fixture to accommodate the proximal instrument shank between the thumb and forefinger. The stabilizing effect on instrument guidance is a result of actuation on the distal side through the additional holding contact at the end of the instrument.

The HEBU manufix soft hand loop rests comfortably around the palm of the hand and is self supporting, leaving hand and finger movements practically unimpeded. The flexible arrest mechanism leaves the surgeon full mobility, allowing the customary operating technique to be practised without restrictions.

The pleasant-to-handle instrument holder in soft silicone permits simple exchange of instruments, has full sterilization capability and can be used both right and left-handed.

HEBU manufix – Lazo de mano para empleo en microcirugía

(DPA 10 2009 005 659.9)

El instrumento se sujeta en el lado proximal en una abertura del lazo de mano, de modo que al accionarse el instrumento se obtiene una mejor estabilidad de guía. De este modo, se reducen los movimientos erróneos al accionarse o se evitan totalmente.

El soporte de instrumentos HEBU manufix consta de un lazo suave que envuelve la palma de la mano y pone a disposición entre el pulgar y el dedo índice un dispositivo de sujeción para alojar el mango proximal del instrumento. El efecto estabilizador sobre la guía del instrumento se deriva, en caso de accionamiento distal, del contacto adicional de sujeción en el extremo del instrumento.

El suave lazo de mano HEBU manufix se apoya agradablemente y con autofijación alrededor de la palma de la mano, de modo que la movilidad de la mano y los dedos no se ve prácticamente alterada. La sujeción flexible permite al operador una movilidad plena, de modo que puede practicar sin limitaciones su técnica usual de operación.

El portainstrumentos de silicona blanda y de agarre simpático permite un sencillo cambio de instrumentos, se puede esterilizar y se puede emplear tanto por diestros como por zurdos.
